## TEAM 18

Author: Kenneth Tran

### 1. Landing Page Improvements

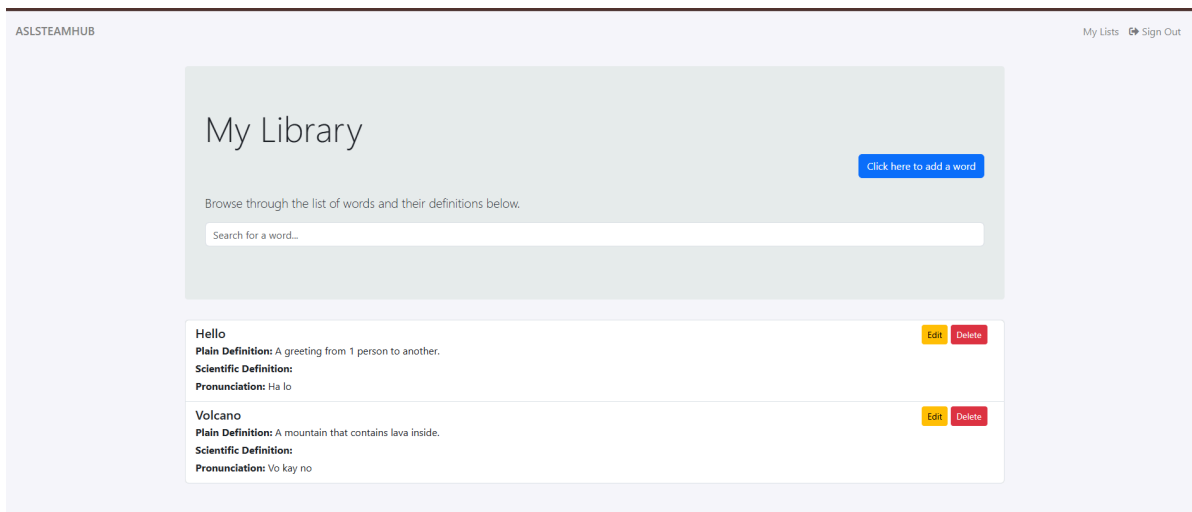

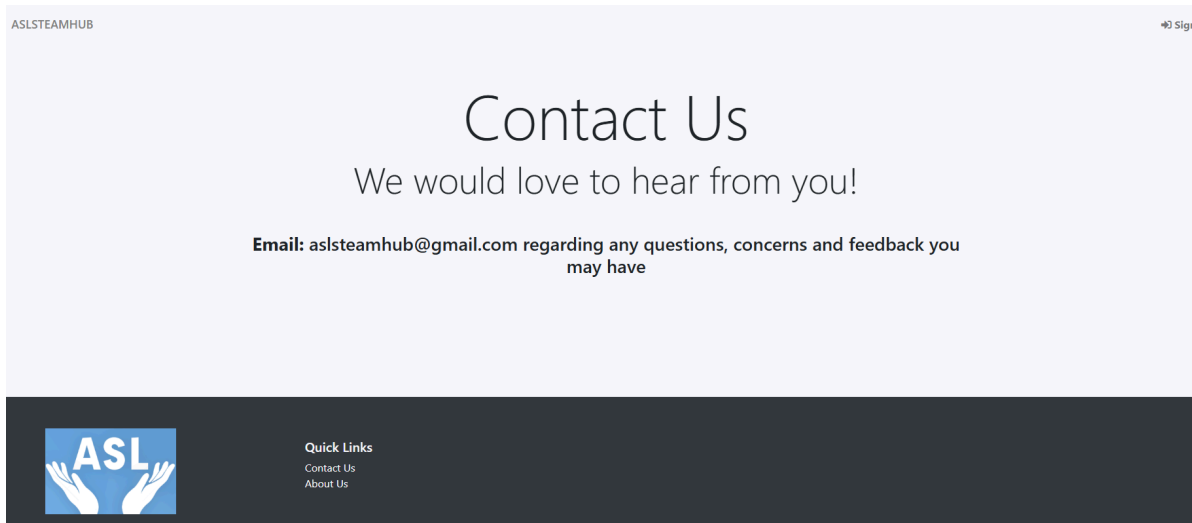

The landing page currently has redundancy in the quick links section.

- **Proposed Enhancements:**

- Add more pages like **Terms of Use** and **Privacy Policy** to improve transparency and credibility.
- Move the **FAQ** section down to a dedicated help section, making it more structured.
- Remove the **Contact an Admin** button and integrate contact options into a more structured **Contact Us** page.
- Consider adding a **Welcome Message or Call-to-Action** to guide new users on how to use the platform effectively.

## 2. Contact Us Page Enhancement

The current contact page is too simple and lacks user engagement.

- **Proposed Enhancements:**

- Implement a **contact form** where users can type in their queries and send them directly to an admin via email.
- Include fields such as:
  - Name
  - Email
  - Subject
  - Message
- Add a **confirmation message** upon form submission, ensuring users know their message has been sent.
- Implement an automated **email response** acknowledging receipt of the query.
- Consider adding **alternative contact options** like a chatbot or a support ticket system for better issue tracking.

### 3. Navigation After Login

Currently, users struggle to navigate between pages due to the absence of a menu bar.

- **Proposed Enhancements:**
  - Introduce a **sticky menu bar** that persists across all pages.
  - Include navigation links to essential sections such as:
    - **Home**
    - **Word Lists**
    - **User Profile**
    - **Settings**
    - **Help & FAQ**
  - Implement a **dropdown menu** for user-specific options like account settings and logout.

### 4. Ambiguous Form Fields

The image shows a form titled "Add New Word" with the following fields:

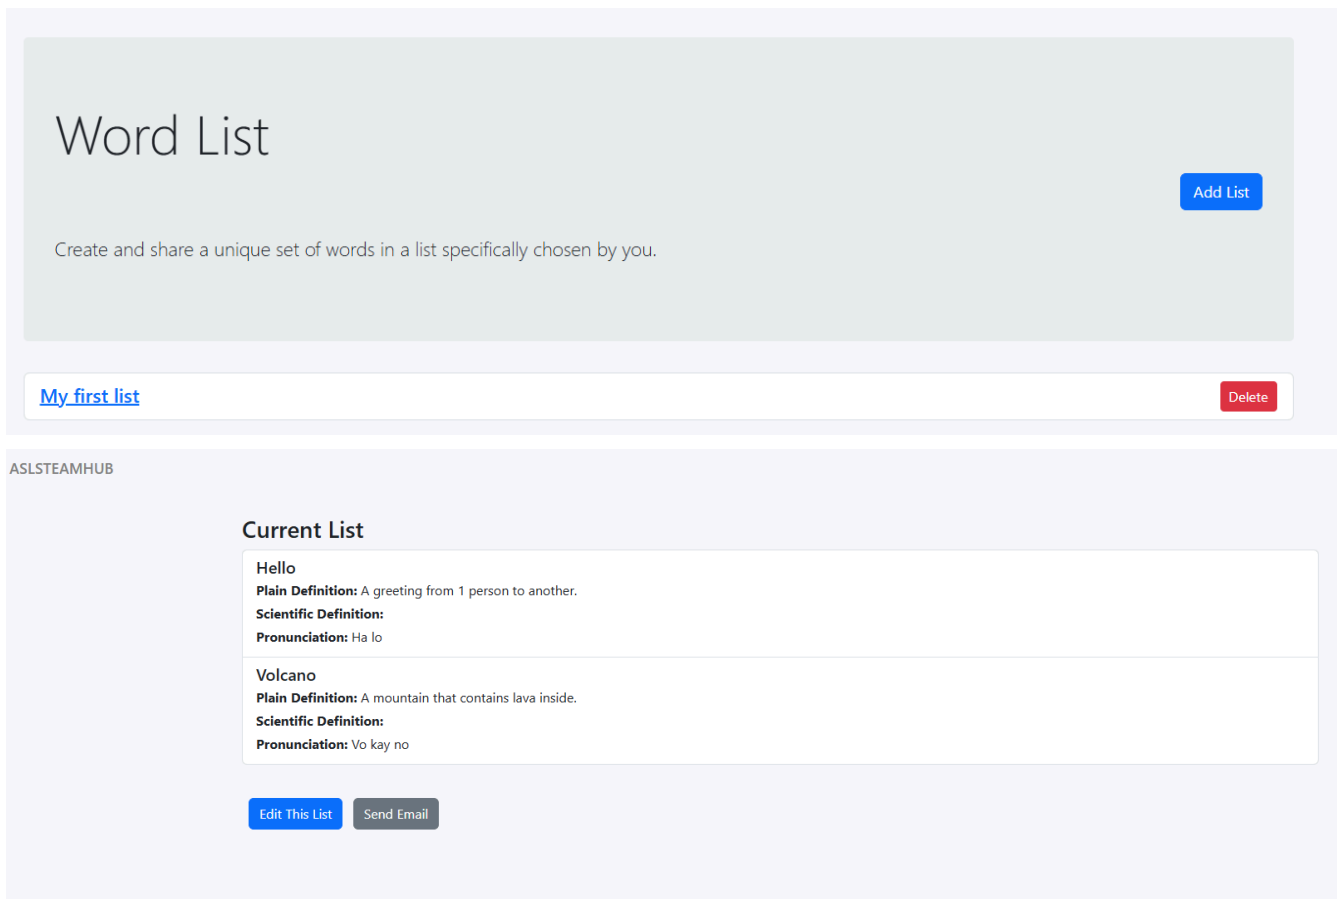

- Word:** A text input field.
- Plain Definition:** A text input field.
- Scientific Definition:** A text input field.
- Pronunciation:** A text input field.
- Video Platform:** A dropdown menu with the text "Select Platform".
- Video Link:** A text input field.

The form fields for adding a new word are unclear and lack guidance.

- **Proposed Enhancements:**

- Add **brief descriptions** for each field to clarify their purpose.
- Indicate which fields are **required** to avoid confusion.
- Introduce **input validation** with error messages to prevent incorrect data entry.
- Include a **cancel button** at the bottom of the form.
  - If clicked, prompt a **warning message** asking if the user is sure they want to discard the changes before returning to the previous page.
- Use **inline validation** to provide real-time feedback when a user fills in a field incorrectly.

## 5. List Management Issues

Users can delete a list but cannot edit it easily. Additionally, the delete button lacks safety measures.

- **Proposed Enhancements:**

- Move the **delete button** to the **word list page** for more intuitive interaction.
- Add an **edit button** that allows users to modify the list details.
- Implement a **confirmation dialog** before deletion to prevent accidental clicks.
- Allow **undo functionality** for recently deleted lists (if feasible).

## 6. User Profile & Credential Management

Currently, users cannot change their personal information without also changing their password, which is inconvenient.

- **Proposed Enhancements:**
  - Split profile management into **two separate forms**:
    - **Profile Information Form:** Allows users to update their name, username, and other non-sensitive details.
    - **Credentials Form:** Specifically for password changes.
  - Implement **real-time validation** for username availability.
  - Provide a **"Save Changes" confirmation prompt** to ensure updates are intentional.
